pole radius against the damping
$\delta = 0.005$ (block)
$\delta = 0.015$ (model)
$\delta = \omega t_s/2$: Euler poles on the circle
exact $e^{-\delta\omega t_s}$
forward Euler (the model)
forward-backward Euler (the block)
|z| of the resonator poles
damping δ
free response of the resonator
x_2 (free response, $x_2(0) = 1$)
t [s]
continuous, $\delta = 0.015$
forward Euler, $\delta = 0.015$ (the model)
forward-backward Euler, $\delta = 0.005$ (the block)
