(a) peak reverse current
abrupt: $I_F\tau/T_M$
0.2
0.35
0.5
A
B
long ramp:
slope 1
I_{rr}/I_F
normalised slope, $a\tau/I_F$
(b) recovered charge
abrupt: $I_F(\tau - \tau_{rr})$
0.2
0.35
0.5
A
B
long ramp:
slope 1
$Q_{rr}/(\tau I_F)$
normalised slope, $a\tau/I_F$
(c) exponent of the charge
ρ = 0.2,
0.35, 0.5
(light to dark)
A
B
$\partial \ln Q_{rr}/\partial \ln a$
normalised slope, $a\tau/I_F$
